Inhalt

Urban Design deals with the shape of cities, towns and landscapes, on the local level of districts as well as on the regional level. Urban Design is not only a profession, but also a process: the real production of the urban environment. We have to ask: Who is involved in the process of Urban Design, how do these people work, what are their urban visions, and what are the social and spatial consequences of their work? The contemporary city is a complex product of various former designs and an agglomeration of different past layers. Knowing the cities' history is necessary to understand their contemporary shape. The Urban Design of the past is an important lesson for the Urban Design of tomorrow: What works, what doesn't work? The course will concern the history of Urban Design in the context of European cities from the ancient times to the postindustrial area.
